Send Andreas Mogensen into Space

A simplified Engineering process for the youngest

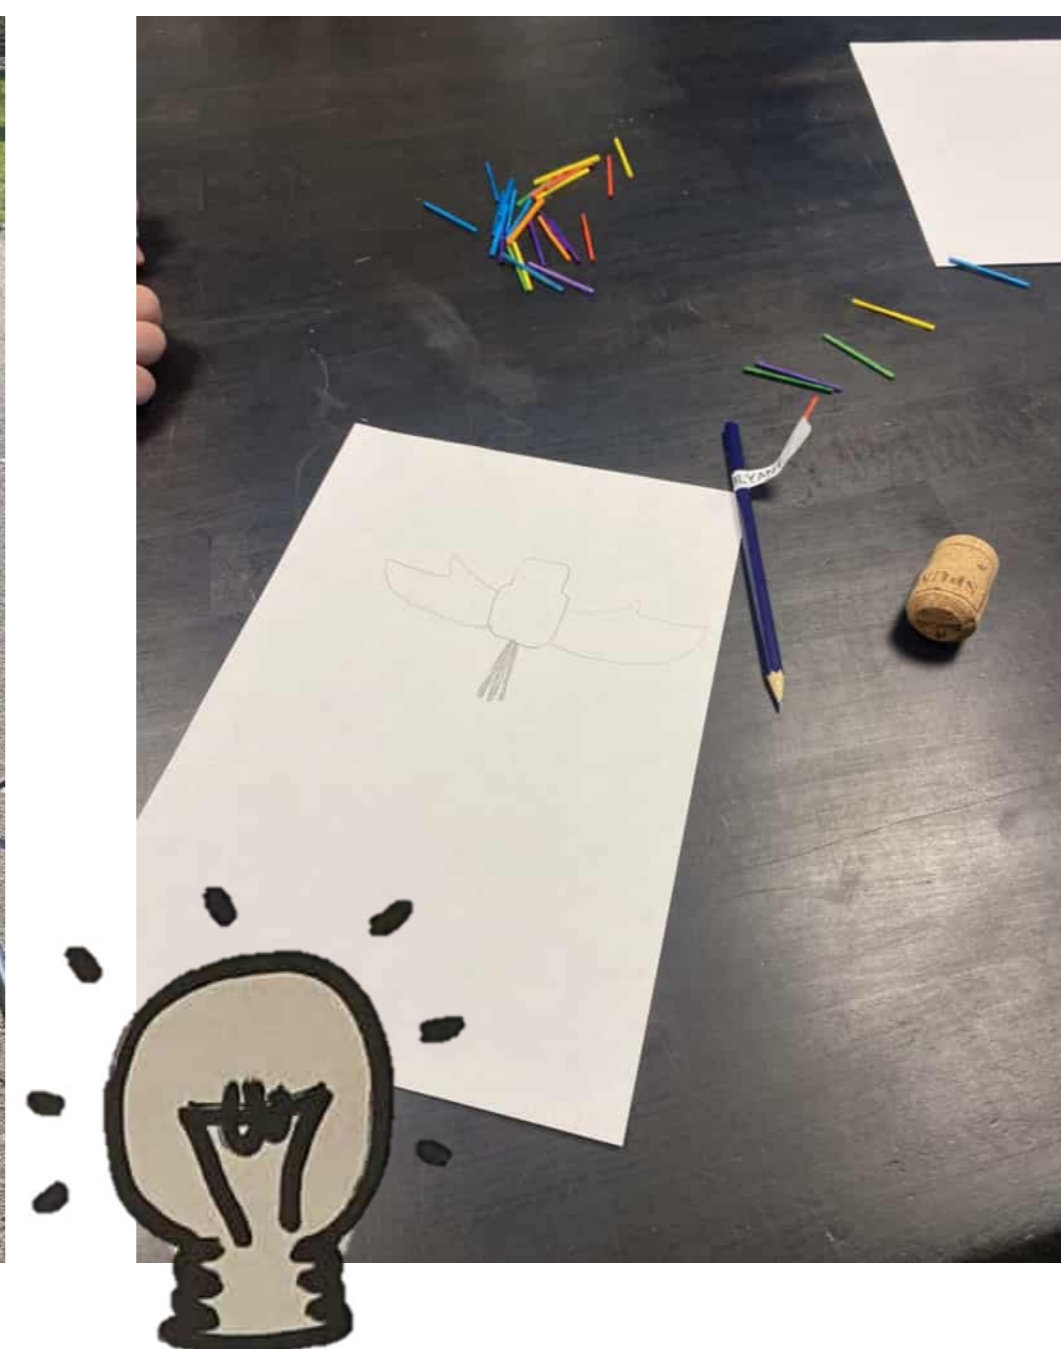

The students are tasked with a challenge:

Build a rocket capable of sending Andreas Mogensen into orbit around the Earth. The goal is to make the rocket fly as high and far as possible.

Using the simplified engineering process, students work to complete the challenge.

Investigate

Generate ideas

Build

Improve

The engineering process combined with rocket launches sparked excitement for science among the youngest. They found the lessons captivating and did not want to leave!
