Green Drama in Early Childhood Education

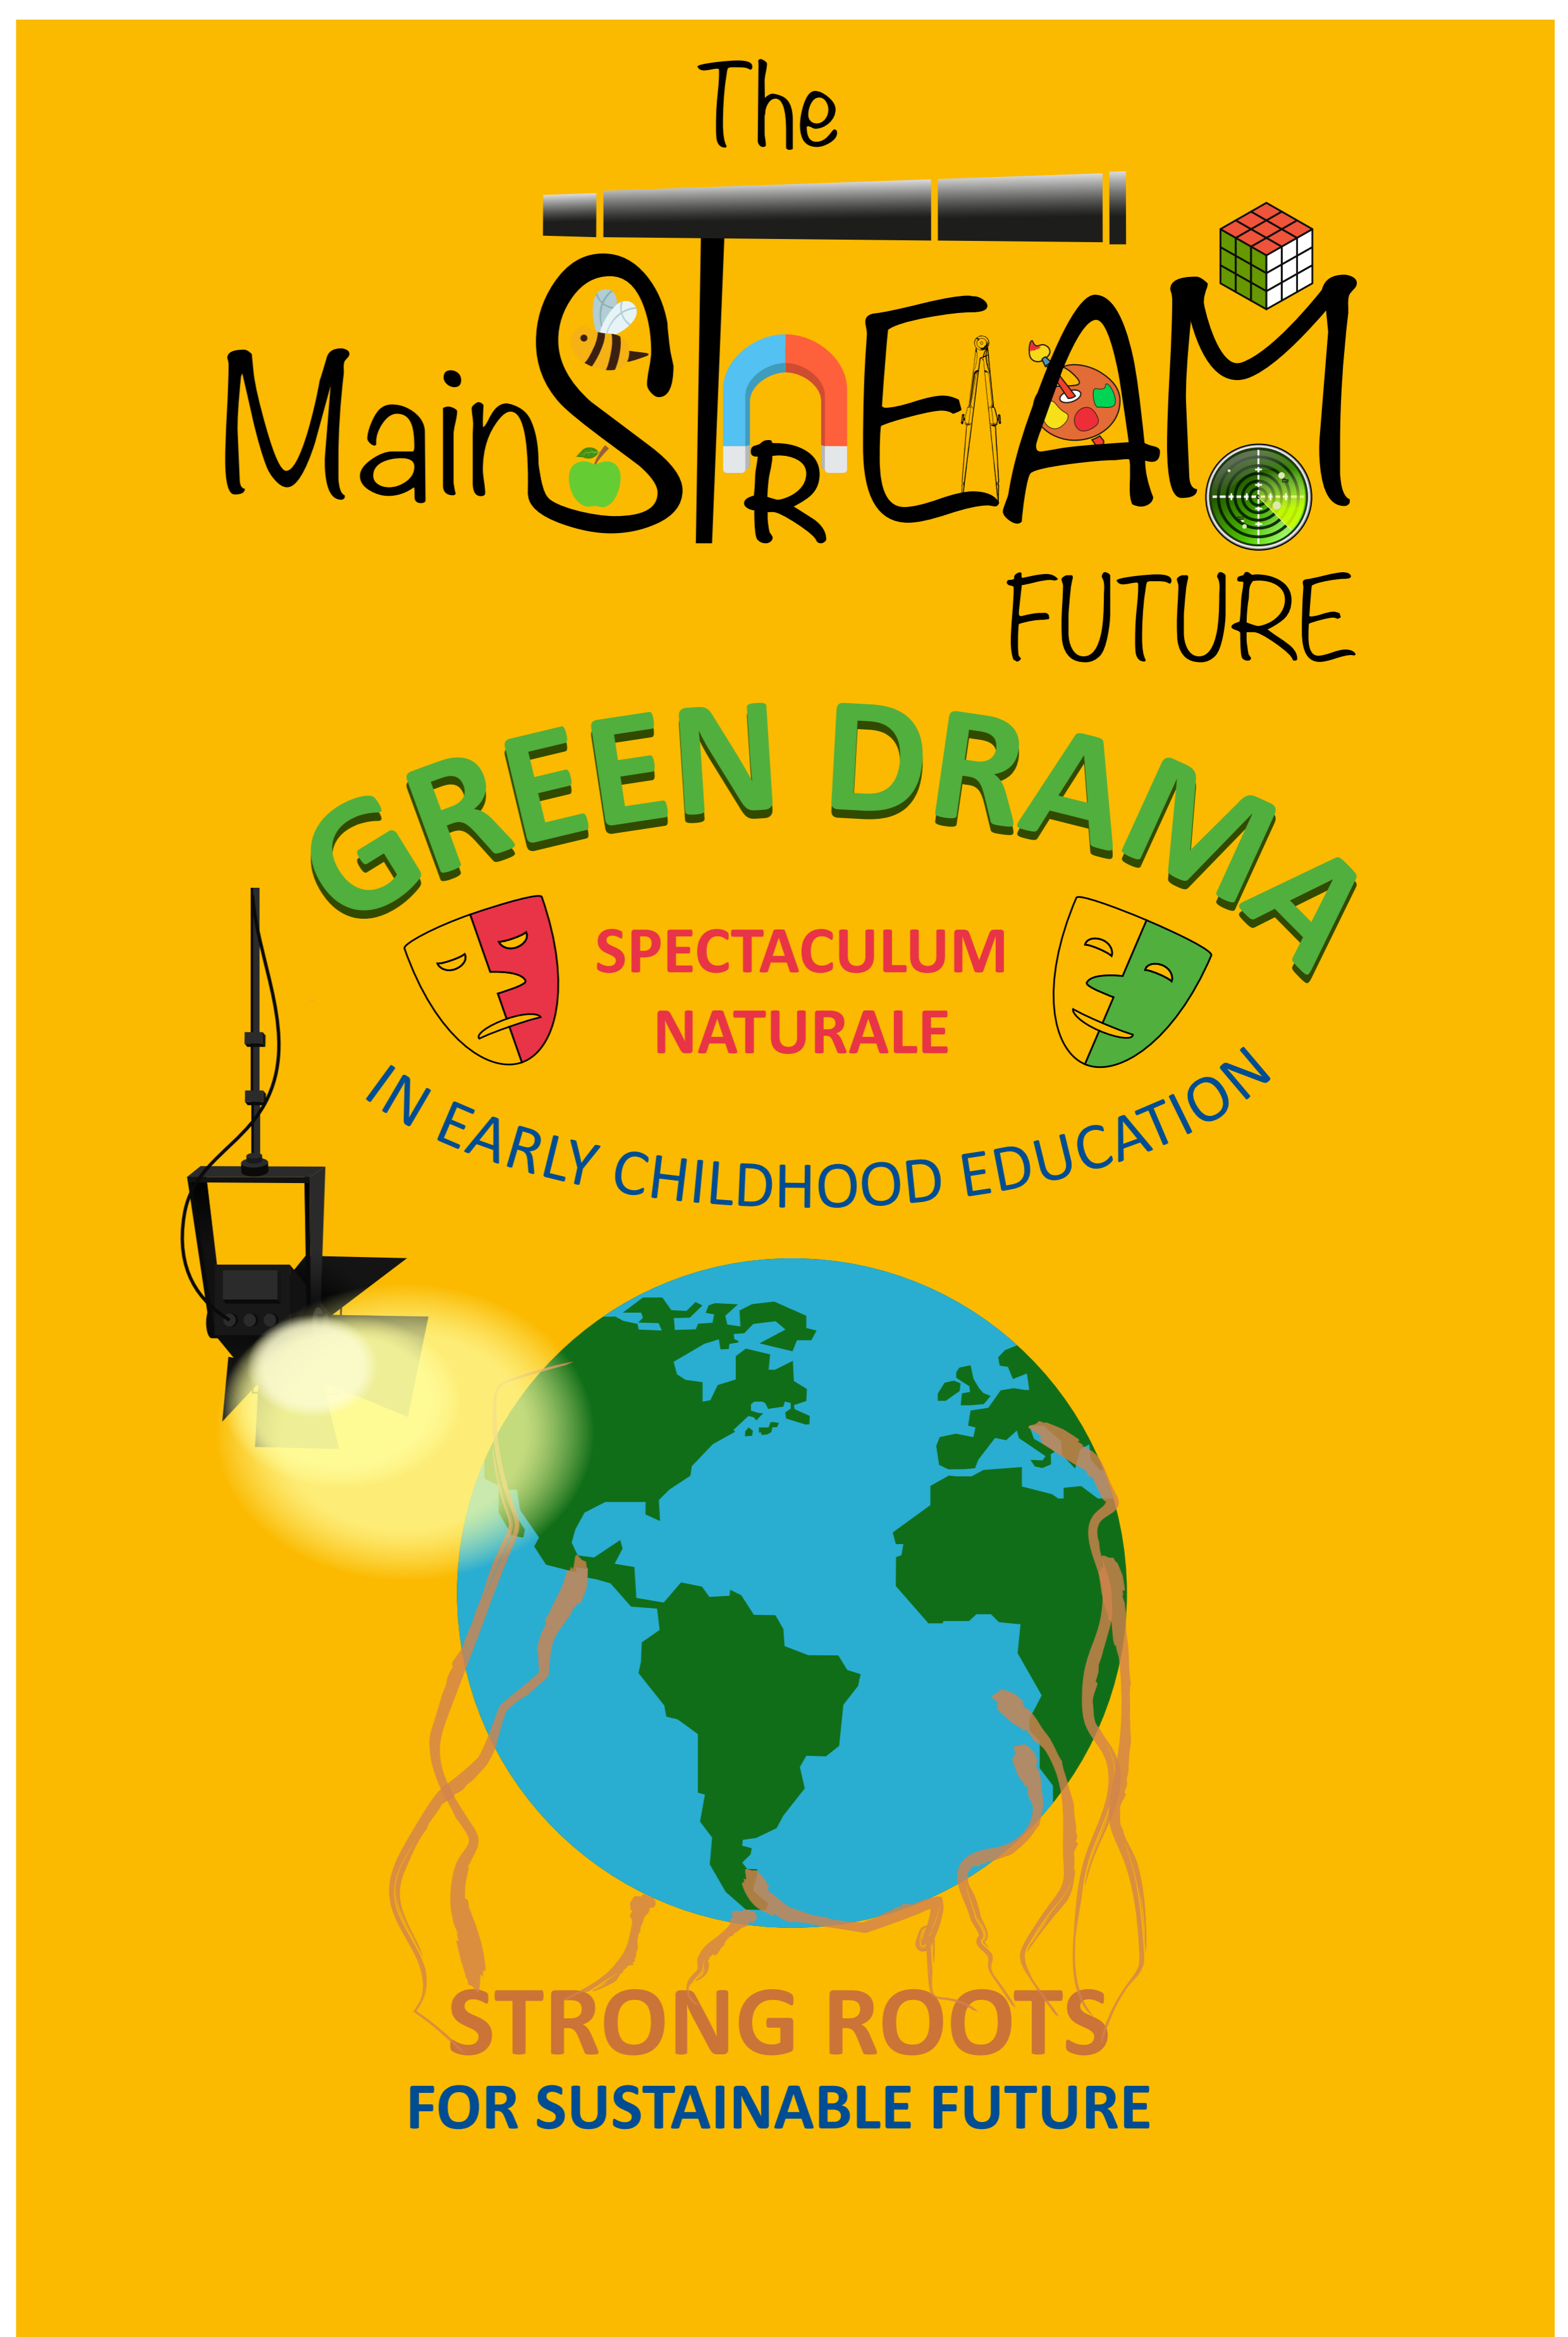

Spectaculum naturale

Green drama is on the **Red Carpet!** For it aims to promote sustainable development and change in human activities. It improves everyday skills, interaction and expression, phenomenon-based learning and art etc. Green drama strengthens both children's circular economy skills and future literacy.

At the core of drama is always a story/fairy tale, involving nature/environment and sustainable development. Children get to take the story forward by experimenting and participating, and come up with solutions by playing, exploring and inventing, regardless of their age.

Welcome to a safe, clean and peaceful future! Early Childhood Education –Early Birds by Nature!
