PHYSICS AS A FAIRY TALE

Trilogy of paradoxical experiments from hydrostatics

Digital scientific movie Physics like a Fairy Tale; is a trilogy of paradoxical experiments in hydrostatics and a story about Mr. Peculiar who lives in the forest and drinks pure water. Behind the seven mountains, beyond the seven seas there is one forest. In that forest lives Mr. Peculiar who drinks clean pure water. And if you thought this was the beginning of the story about Mr. Peculiar you got it wrong. This is a story about water - pure water that is miraculous. The fairy tale is interwoven by paradoxical experiments.

At the end antigravity. Water will not flow out of an upside down glass. You have to see this, and we made sure that all viewers (teachers and students) try and become magicians. The epilogue of the movie is the ionic materialism. The question of the importance of water is as old as civilization itself. What is this world made of? Thales said: it is water. And we chose water because of its interesting properties.

Do you believe in miracles or in the laws of physics or in fairy tales? Watch the movie and fall in love with physics!
