

# Low-Cost Experiments in STEM Education

Maya Boueiz | Université libre de Bruxelles – INFORSCIENCES Department | Brussels | Belgium

## Climate, change is in the air!

A scientific exhibition that has been touring schools in Belgium since 2014!

This exhibition is divided in two parts:

- Climate
- Climate Change.

To understand *Climate Change*, you must understand *Climate* and why do we have different climates on Earth. With several experiments, we explain many core principles such as greenhouse effect, marine and atmospheric currents, rising sea levels, etc.

Like almost all of our activities, this exhibition is presented by university students who will inspire their younger fellows. They will help breaking stereotypes: Anyone can be in STEM!

This exhibition is part of a bigger project called “Sciences à la carte”. With this project, we offer teachers a large choice of free scientific activities. Our role as the department of science outreach at ULB is to make science reachable to everyone.
